6	Chart no 2675 Suriname River from Entrance to Toevlucht and corresponding ENC's no. SR2218A and no. SR2218B	Active

Additional requirements for ships to navigate alongside DE MOLEN jetty

- The river bar in the entrance of the Suriname River needs to be taken in consideration for the draft calculation of vessels to and from the De Molen Jetty.**

Water level	CD + water level	Depth	Keel clearance	Draft
MHWN	4.00 m + 2.15 m	6.15 m	0.30	5.85 m
MHWS	4.00 m + 2.80 m	6.80 m	0.40	6.40 m

- Length overall (LOA)**

De Molen Jetty can accommodate vessels with a maximum length of **one hundred meters (100m)**

- Depth at Berth:**

The berthing area at the De Molen Jetty has a depth of **3.5 meters** at Low Water Spring.

- Mooring and departing at starboard side is; 3.5m- 0.20m (keel clearance) = 3.3m + tidal rise calculated at time of mooring.
- Mooring and departing at portside is; 3.5m- 0.20m (keel clearance) = 3.3m + tidal rise calculated at time of mooring.

Note:

- Under special circumstances the MAS is authorized to request tugboat assistance
- Vessels with bow thrusters which are not in good working condition are regarded as vessels without bow thrusters.
- A mooring boat must be on standby to assist with the mooring lines.

Due to the rapid sedimentation rate periodic maintenance is required. The Maritime Authority Suriname will issue the depth at De Molen Jetty on regular basis after each bathymetric survey. The latest depth survey De Molen Jetty dated August 2018 (depths are referred to LWS) is shown as an attachment figure.

Approved by the
Maritime Authority Suriname,

Mr. M. Amafo LL.M
Director
